

Diagram illustrating a DNA double helix structure with a red dashed line indicating a cut site. The top strand is labeled 'AC' and the bottom strand is labeled 'AG'. The cut site is between the 'A' and 'T' on the top strand and between the 'T' and 'C' on the bottom strand. The top strand is labeled 'ATTCTT' and the bottom strand is labeled 'TTCCTCTA'. The cut site is between the 'T' and 'C' on the top strand and between the 'C' and 'T' on the bottom strand. The top strand is labeled 'AC' and the bottom strand is labeled 'AG'. The cut site is between the 'A' and 'T' on the top strand and between the 'T' and 'C' on the bottom strand. The top strand is labeled 'ATTCTT' and the bottom strand is labeled 'TTCCTCTA'. The cut site is between the 'T' and 'C' on the top strand and between the 'C' and 'T' on the bottom strand.

The diagram consists of 20 identical horizontal green bars stacked vertically. Each bar is bisected by a vertical dashed red line. On the left side of the line, the sequence 'TTCCTCTA' is written in black. On the right side of the line, the sequence 'TTCCTCTA' is also written in black.

The diagram illustrates a DNA double helix structure. A red dashed vertical line indicates a break in the DNA. The sequence **TTCCTCTA** is highlighted in green on both strands. The strands are labeled with bases G, A, T, C, and GT.
